

# Machine Learning

**Zhou Zhao (赵洲)**

College of Computer Science  
Zhejiang University

zhaozhou@zju.edu.cn

# Short Bio

- ▶ Dr. Zhou Zhao (赵洲)
  - zhaozhou@zju.edu.cn
- ▶ Associate Professor at CS college (人工智能所).
  - 玉泉校区曹光彪楼主楼415室
- ▶ Research interests:
  - Machine learning
  - Data mining
  - Computer vision
  - ...
- ▶ <https://person.zju.edu.cn/zhaozhou>

# Course information (Cont'd)

- ▶ Prerequisite:
  - Linear algebra, analysis, **probability theory**
  - Basic programming skills
  
- ▶ Course textbook: No textbook is required. (Papers and other materials are available at the class web page)
  
- ▶ **Objective:**
  - Basic understandings of some of the important **machine learning** methods.
  - Basic ability to use some **machine learning** techniques to solve real world problems.

# Reference Books

- ▶ R. Duda, P. Hart & D. Stork, ***Pattern Classification*** (2<sup>nd</sup> ed.), Wiley, 2000
- ▶ C. M. Bishop, ***Pattern Recognition and Machine Learning***, Springer, 2006
- ▶ T. Hastie, R. Tibshirani & J. Friedman, ***The Elements of Statistical Learning: Data Mining, Inference, and Prediction*** (2<sup>nd</sup> ed.), Springer, 2009
- ▶ Kevin Murphy, ***Machine Learning: A Probabilistic Perspective***, The MIT Press, 2012

# 评测指标

- ▶ 大作业（图片分类）：70%
  - 思路PPT讲解：10%
  - 作业报告：30%
  - 编程代码：30%
  - 报告截止日期：第15周周五晚上12点整
- ▶ 小作业：
  - 阅读SVM开源算法报告：10%
    - 报告截止日期：第8周周五晚上12点整
  - 阅读Transformer开源算法报告：10%
    - 报告截止日期：第15周周五晚上12点整
- ▶ 课堂参与：10%
  - 签到10次，每次占1%

# 大作业

## 图片分类 (<http://yann.lecun.com/exdb/mnist/>)

CLASSIFIER	PREPROCESSING	TEST ERROR RATE (%)	Reference
Linear Classifiers			
linear classifier (1-layer NN)	none	12.0	<a href="#">LeCun et al. 1998</a>
linear classifier (1-layer NN)	deskewing	8.4	<a href="#">LeCun et al. 1998</a>
pairwise linear classifier	deskewing	7.6	<a href="#">LeCun et al. 1998</a>
K-Nearest Neighbors			
K-nearest-neighbors, Euclidean (L2)	none	5.0	<a href="#">LeCun et al. 1998</a>
K-nearest-neighbors, Euclidean (L2)	none	3.09	<a href="#">Kenneth Widler U. Chicago</a>
K-nearest-neighbors, L3	none	2.83	<a href="#">Kenneth Widler U. Chicago</a>
K-nearest-neighbors, Euclidean (L2)	deskewing	2.4	<a href="#">LeCun et al. 1998</a>
K-nearest-neighbors, Euclidean (L2)	deskewing, noise removal, blurring	1.80	<a href="#">Kenneth Widler U. Chicago</a>
K-nearest-neighbors, L3	deskewing, noise removal, blurring	1.73	<a href="#">Kenneth Widler U. Chicago</a>
K-nearest-neighbors, L3	deskewing, noise removal, blurring, 1 pixel shift	1.33	<a href="#">Kenneth Widler U. Chicago</a>
K-nearest-neighbors, L3	deskewing, noise removal, blurring, 2 pixel shift	1.22	<a href="#">Kenneth Widler U. Chicago</a>
K-NN with non-linear deformation (IDM)	shiftable edges	0.54	<a href="#">Keysees et al. IEEE PAMI 2007</a>
K-NN with non-linear deformation (P2DHMDM)	shiftable edges	0.52	<a href="#">Keysees et al. IEEE PAMI 2007</a>
K-NN, Tangent Distance	subsampling to 16x16 pixels	1.1	<a href="#">LeCun et al. 1998</a>
K-NN, shape context matching	shape context feature extraction	0.63	<a href="#">Belongie et al. IEEE PAMI 2002</a>
Boosted Stumps			
boosted stumps	none	7.7	<a href="#">Kegl et al. ICML 2009</a>
products of boosted stumps (3 terms)	none	1.26	<a href="#">Kegl et al. ICML 2009</a>
boosted trees (17 leaves)	none	1.53	<a href="#">Kegl et al. ICML 2009</a>
stumps on Haar features	Haar features	1.02	<a href="#">Kegl et al. ICML 2009</a>
product of stumps on Haar f	Haar features	0.87	<a href="#">Kegl et al. ICML 2009</a>
Non-Linear Classifiers			
40 PCA + quadratic classifier	none	3.3	<a href="#">LeCun et al. 1998</a>
1000 RBF + linear classifier	none	3.6	<a href="#">LeCun et al. 1998</a>
SVMs			
SVM, Gaussian Kernel	none	1.4	
SVM deg 4 polynomial	deskewing	1.1	<a href="#">LeCun et al. 1998</a>
Reduced Set SVM deg 5 polynomial	deskewing	1.0	<a href="#">LeCun et al. 1998</a>
Virtual SVM deg-9 poly [distortions]	none	0.8	<a href="#">LeCun et al. 1998</a>
Virtual SVM, deg-9 poly, 1-pixel jittered	none	0.68	<a href="#">DeCoste and Scholkopf, MLJ 2002</a>
Virtual SVM, deg-9 poly, 1-pixel jittered	deskewing	0.68	<a href="#">DeCoste and Scholkopf, MLJ 2002</a>
Virtual SVM, deg-9 poly, 2-pixel jittered	deskewing	0.56	<a href="#">DeCoste and Scholkopf, MLJ 2002</a>

Neural Nets			
2-layer NN, 300 hidden units, mean square error	none	4.7	<a href="#">LeCun et al. 1998</a>
2-layer NN, 300 HU, MSE, [distortions]	none	3.6	<a href="#">LeCun et al. 1998</a>
2-layer NN, 300 HU	deskewing	1.6	<a href="#">LeCun et al. 1998</a>
2-layer NN, 1000 hidden units	none	4.5	<a href="#">LeCun et al. 1998</a>
2-layer NN, 1000 HU, [distortions]	none	3.8	<a href="#">LeCun et al. 1998</a>
3-layer NN, 300+100 hidden units	none	3.05	<a href="#">LeCun et al. 1998</a>
3-layer NN, 300+100 HU [distortions]	none	2.5	<a href="#">LeCun et al. 1998</a>
3-layer NN, 500+150 hidden units	none	2.95	<a href="#">LeCun et al. 1998</a>
3-layer NN, 500+150 HU [distortions]	none	2.45	<a href="#">LeCun et al. 1998</a>
3-layer NN, 500+300 HU, softmax, cross entropy, weight decay	none	1.53	<a href="#">Hinton, unpublished, 2005</a>
2-layer NN, 800 HU, Cross-Entropy Loss	none	1.6	<a href="#">Simard et al. ICDAR 2003</a>
2-layer NN, 800 HU, cross-entropy [affine distortions]	none	1.1	<a href="#">Simard et al. ICDAR 2003</a>
2-layer NN, 800 HU, MSE [elastic distortions]	none	0.9	<a href="#">Simard et al. ICDAR 2003</a>
2-layer NN, 800 HU, cross-entropy [elastic distortions]	none	0.7	<a href="#">Simard et al. ICDAR 2003</a>
NN, 784-500-500-2000-30 + nearest neighbor, RBM + NCA training [no distortions]	none	1.0	<a href="#">Salakhutdinov and Hinton, AI-Stats 2007</a>
6-layer NN 784-2500-2000-1500-1000-500-10 (on GPU) [elastic distortions]	none	0.35	<a href="#">Ciresan et al. Neural Computation 10, 2010 and arXiv 1003.0358, 2010</a>
committee of 25 NN 784-800-10 [elastic distortions]	width normalization, deslanting	0.39	<a href="#">Meier et al. ICDAR 2011</a>
deep convex net, unsup pre-training [no distortions]	none	0.83	<a href="#">Deng et al. Interspeech 2010</a>
Convolutional nets			
Convolutional net LeNet-1	subsampling to 16x16 pixels	1.7	<a href="#">LeCun et al. 1998</a>
Convolutional net LeNet-4	none	1.1	<a href="#">LeCun et al. 1998</a>
Convolutional net LeNet-4 with K-NN instead of last layer	none	1.1	<a href="#">LeCun et al. 1998</a>
Convolutional net LeNet-4 with local learning instead of last layer	none	1.1	<a href="#">LeCun et al. 1998</a>
Convolutional net LeNet-5, [no distortions]	none	0.95	<a href="#">LeCun et al. 1998</a>
Convolutional net LeNet-5, [huge distortions]	none	0.85	<a href="#">LeCun et al. 1998</a>
Convolutional net LeNet-5, [distortions]	none	0.8	<a href="#">LeCun et al. 1998</a>
Convolutional net Boosted LeNet-4, [distortions]	none	0.7	<a href="#">LeCun et al. 1998</a>
Trainable feature extractor + SVMs [no distortions]	none	0.83	<a href="#">Lauer et al. Pattern Recognition 40-6, 2007</a>
Trainable feature extractor + SVMs [elastic distortions]	none	0.56	<a href="#">Lauer et al. Pattern Recognition 40-6, 2007</a>
Trainable feature extractor + SVMs [affine distortions]	none	0.54	<a href="#">Lauer et al. Pattern Recognition 40-6, 2007</a>
unsupervised sparse features + SVM, [no distortions]	none	0.59	<a href="#">Labusch et al. IEEE TNN 2008</a>
Convolutional net, cross-entropy [affine distortions]	none	0.6	<a href="#">Simard et al. ICDAR 2003</a>
Convolutional net, cross-entropy [elastic distortions]	none	0.4	<a href="#">Simard et al. ICDAR 2003</a>
large conv. net, random features [no distortions]	none	0.09	<a href="#">Ranzato et al. CVPR 2007</a>
large conv. net, unsup features [no distortions]	none	0.62	<a href="#">Ranzato et al. CVPR 2007</a>
large conv. net, unsup pretraining [no distortions]	none	0.60	<a href="#">Ranzato et al. NIPS 2006</a>
large conv. net, unsup pretraining [elastic distortions]	none	0.39	<a href="#">Ranzato et al. NIPS 2006</a>
large conv. net, unsup pretraining [no distortions]	none	0.53	<a href="#">Jarrett et al. ICCV 2009</a>
large/deep conv. net, 1-20-40-60-80-100-120-120-10 [elastic distortions]	none	0.35	<a href="#">Ciresan et al. ICAI 2011</a>
committee of 7 conv. net, 1-20-P-40-P-150-10 [elastic distortions]	width normalization	0.27 +0.02	<a href="#">Ciresan et al. ICDAR 2011</a>
committee of 35 conv. net, 1-20-P-40-P-150-10 [elastic distortions]	width normalization	0.23	<a href="#">Ciresan et al. CVPR 2012</a>

# 大作业要求

- ▶ Good Presentation
- ▶ Good Survey
- ▶ Good Implementation
- ▶ Good Experimental Analysis
- ▶ Novel Ideas is much better (**but is not the requirement**)
- ▶ Report written using **Word** (10 pages without reference)
- ▶ Code written by **Python (based on GPU or CPU)**

# Presentation Slot

- ▶ Send the email to RA (jiangqingyun@zju.edu.cn) to bid the presentation slot
  - e.g. prefers  $A > B > C > D$
- ▶ Arrange the presentation slot based on your preference and the timestamp of the email, including
  - 15-th week Monday
  - 15-th week Tuesday
  - 16-th week Monday
  - 16-th week Tuesday

# 小作业1

- ▶ LIBSVM (<https://github.com/cjlin1/libsvm>)
- ▶ 6页报告（包括SVM原理，代码理解以及数据集上实验结果）

Code

shijie-wu remove unused activation dropout (#18842)

9faa9f9

6 minutes ago

10,610 commits

.circleci	Determine framework automatically before ONNX export (#18615)	18 days ago
.github	Add checks for more workflow jobs (#18905)	5 days ago
docker	Revert "TF: unpin maximum TF version (#18917)" (#18972)	2 days ago
docs	Neptune.ai integration improvements (#18934)	3 days ago
examples	Neptune.ai integration improvements (#18934)	3 days ago
model_cards	Update URL for Hub PR docs (#17532)	3 months ago
notebooks	add zero-shot obj detection notebook to docs (#18453)	last month
scripts	transformers-cli login => huggingface-cli login (#18490)	last month
src/transformers	remove unused activation dropout (#18842)	6 minutes ago
templates	TF: final bias as a layer in seq2seq models (replicate TFMarian fix) (#...	5 days ago
tests	RFC: Replace custom TF embeddings by Keras embeddings (#18939)	2 days ago
utils	Add X-CLIP (#18852)	4 days ago
.coveragerc	GPU text generation: mMoved the encoded_prompt to correct device	3 years ago
.gitattributes	Add trajectory transformer (#17141)	4 months ago

## About

🤗 Transformers: State-of-the-art Machine Learning for Pytorch, TensorFlow, and JAX.

# What is machine learning?

- ▶ Machine learning is the study of computer systems that improve their performance through experience.
  - Learn existing and known structures and rules.
    - Face recognition
  - Discover new findings and structures.
    - News summarization
- ▶ In machine learning, we study two types of problems

# Types of Machine Learning

## Types of Machine Learning

# Supervised Learning

- ▶ Supervised learning
  - Goal: learn a mapping from inputs  $\mathbf{x}$  to outputs  $y$
  - Training data: a labeled set of input-output pairs
  - Classification (Categorization, Decision making...)
    - $y$  is a categorical variable
  - Regression
    - $y$  is real-valued

# Types of Machine Learning

## Types of Machine Learning

# Unsupervised Learning

- ▶ Unsupervised learning
  - We are only given inputs
  - Goal: find “interesting patterns”
  - Much less well-defined problem
  
  - Discovering clusters, Clustering
  - Discovering latent factors
    - Dimensionality reduction, Matrix factorization, Topic modeling

# Unsupervised Learning (Clustering)

# Types of Machine Learning

## Types of Machine Learning

# Reinforcement Learning

- ▶ Reinforcement learning
  - It is a supervised learning scenario
  - No desired category signal is given
  - The only teaching feedback is that the tentative category is right or wrong.
  - This is useful for learning how to act or behave when given occasional reward or punishment signals.

# Focus of This Course

- ▶ What are the typical machine learning **problems**?
  - Supervised Learning
    - Classification (decision making)
    - Regression
  - Unsupervised Learning
    - Cluster analysis
    - Latent factor analysis
- ▶ What are the basic machine learning **tools (methods, algorithms)**?
- ▶ Python programming

# Basic Concepts of Supervised Learning

- ▶ Sample, example, pattern

- ▶ Features, predictors, independent variables

- $\mathbf{x}_1, \mathbf{x}_2, \dots, \mathbf{x}_n$

- ▶ State of the nature, labels, pattern class, class, responses, dependent variables

- $\omega_1, \omega_2, \dots, \omega_c$  or  $y_1, y_2, \dots, y_c$  or  $z_1, z_2, \dots, z_c$

- ▶ Training data

- $(\mathbf{x}_1, \omega_1), (\mathbf{x}_2, \omega_2), \dots, (\mathbf{x}_n, \omega_n)$

- ▶ Model, statistical model, pattern class model, classifier

- $f$

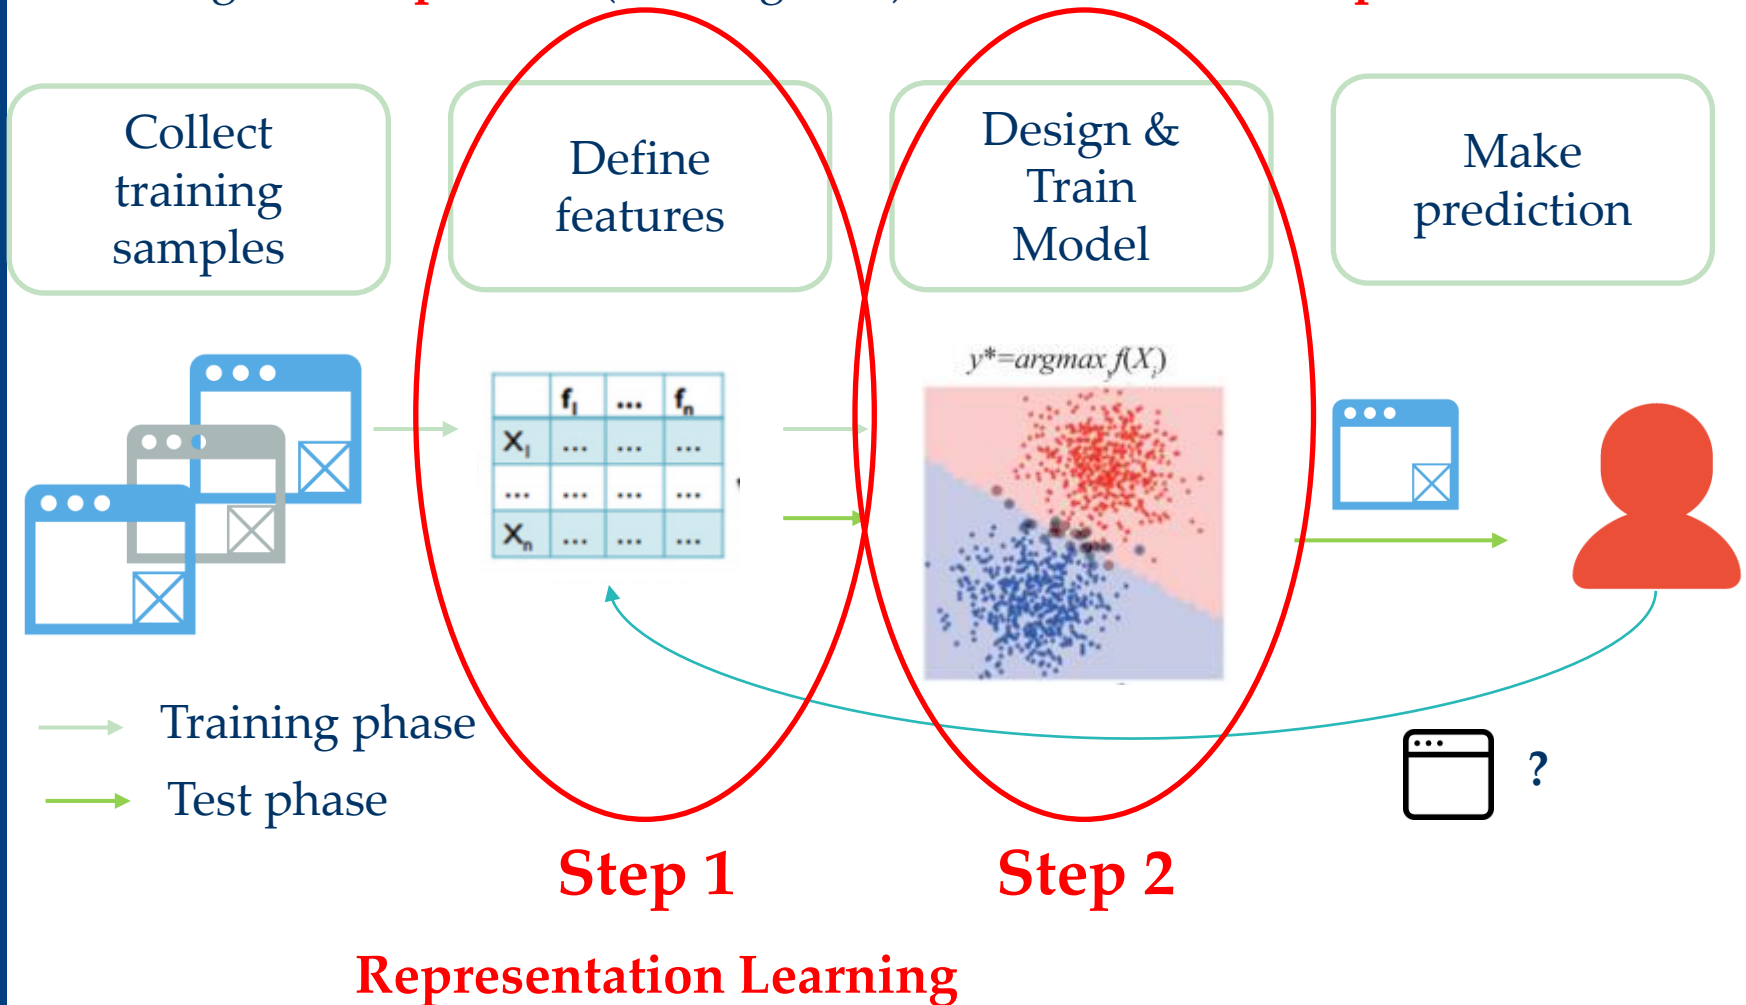

- ▶ Test data

- ▶ Training error & test error

# Supervised Learning

Learning from **experience**(training data), and build **model** to **predict** the future

# Supervised Learning

Define  
features

	$f_1$	...	$f_n$
$x_1$	...	...	...
...	...	...	...
$x_n$	...	...	...

**Step 1**

Design &  
Train  
Model

$$y^* = \operatorname{argmax}_y f(X_i)$$

**Step 2**

- ▶ Which step is more important in building a successful system?
- ▶ Which one is the focus of this course?

# Why general classification hard?

- ▶ Intra-class variability

The letter "T" in different typefaces

Define  
features

	$f_1$	...	$f_n$
$x_1$	...	...	...
...	...	...	...
$x_n$	...	...	...

**Step 1 is not  
good enough**

Same face under different expression, pose, illumination

# Why general classification hard?

- Inter-class similarity

Define  
features

	$f_1$	...	$f_n$
$x_1$	...	...	...
...	...	...	...
$x_n$	...	...	...

**Step 1 is not  
good enough**

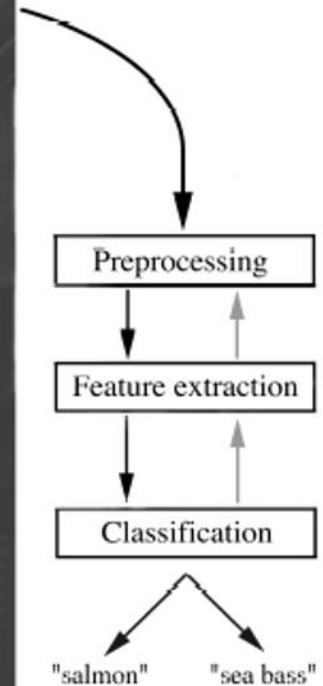

# Representation: Features

- ▶ Extract features to represent the samples
- ▶ Feature vector
- ▶ Good representation:
  - Low intra-class variability
  - Low inter-class similarity

# Fish Classification: Salmon v. Sea Bass

Preprocessing involves  
image enhancement  
and segmentation;

- (i) separate touching  
or occluding fishes  
and
- (ii) extract fish  
contour

# How to design a classifier?

- ▶ Supervised learning
  - Goal: learn a mapping from inputs  $x$  to outputs  $y$ 
    - Fish length as a feature
  - Training data: a labeled set of input-output pairs
    - (Salmon, 10cm)
    - (bass, 20cm)
    - ...
  - Features of different class should be different.
    - Meaning what?

# Probability Densities

$$P(z) = \int_{-\infty}^z p(x) dx$$

cumulative distribution function (CDF)

probability density function (PDF)

$$p(x) \geq 0 \quad \int_{-\infty}^{\infty} p(x) dx = 1 \quad p(x \in (a, b)) = \int_a^b p(x) dx$$

# Representation: Fish Length As Feature

Training (design or learning) Samples

$p(x|\text{salmon})$

$p(x|\text{bass})$

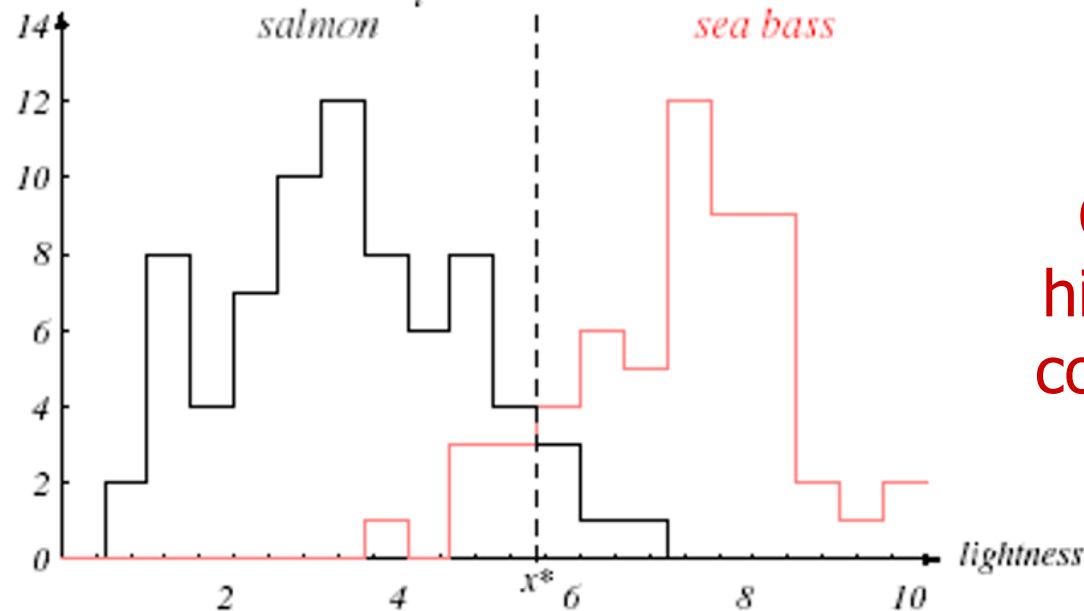

# Fish Lightness As Feature

# Which Feature is better

Overlap of these histograms is small compared to length feature

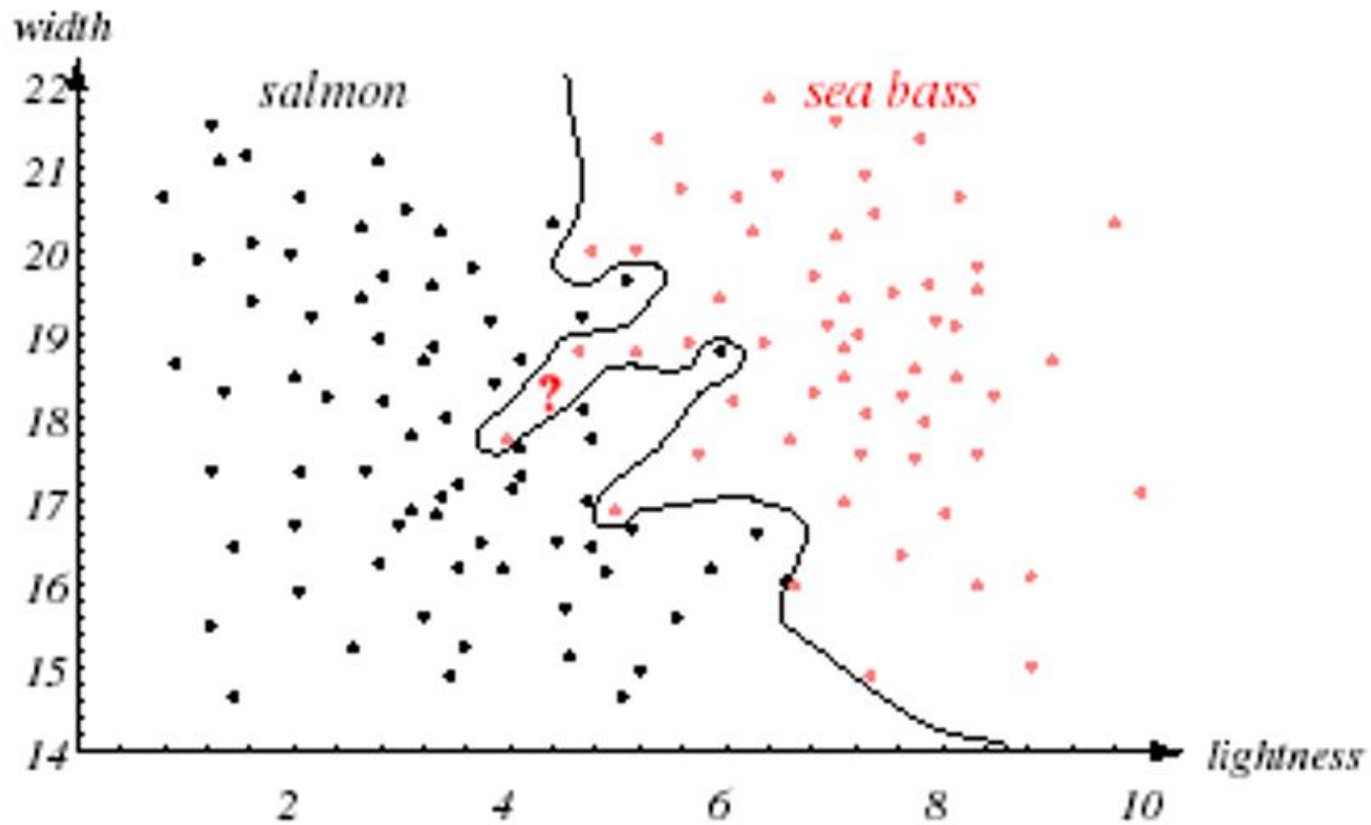

# Two-dimensional Feature Space

Linear (simple) decision boundary

Two features together are better than individual features

# Complex Decision Boundary

# Generalization

- ▶ A generalization of a concept is an extension of the concept to less-specific criteria.
- ▶ Generalization of the classifier (model)
  - The performance of the classifier on **test** data.
- ▶ Training error:
- ▶ Simple model  $\rightarrow$  large training error
- ▶ Complex model  $\rightarrow$  less training error
- ▶ Test error:
- ▶ Simple model  $\rightarrow$  ?
- ▶ Complex model  $\rightarrow$  ?

# Prerequisite Knowledge

- ▶ **P**robability:
  - 浙大出版社 《概率论》
- ▶ **A**nalysis:
  - 高教出版社 《数学分析》 上下
- ▶ **L**inear Algebra
  - 高教出版社 《代数与几何》

# Prerequisite Knowledge

- ▶ Probability: **P** p1-70
  - Bayes' rule, **P** p34
- ▶ Analysis:
  - Taylor series, **A** 上 p134
  - Constrained optimization, **A** 下 p176
    - Lagrangian multiplier, **A** 下 p343
- ▶ Linear Algebra
  - Linear space, **L** p58-82
  - Matrix, **L** p119-150
    - Rank, **L** p139
    - Positive definite matrix, **L** p263
    - Eigenvector, eigenvalue, **L** p234
    - Singular vector, singular value, **wiki**
